FRONTEND WEB DEVELOPMENT

INTRODUCTION

NexDo – Your Smart Task Manager is a web-based task management application designed to help users organize, manage, and track their daily activities efficiently. The application provides a simple and user-friendly interface through which users can create tasks, set priorities and due dates, categorize their work, and monitor task completion.

The main purpose of NexDo is to make daily task management easier and more organized. Instead of remembering multiple tasks manually, users can maintain their activities in one place and quickly identify pending, important, and completed tasks.

The project is developed using **HTML5, CSS3, and JavaScript**, with **Local Storage** used to save user and task data directly in the browser. NexDo also provides useful features such as search, filters, categories, priorities, dark/light mode, trash and restore functionality, and a responsive user interface.

PROJECT OBJECTIVES

The main objective of **NexDo – Your Smart Task Manager** is to develop a simple, efficient, and user-friendly web application for managing daily tasks.

The major objectives are:

1. To build an easy-to-use task manager with a simple and attractive interface.
2. To help users organize their daily tasks efficiently.
3. To allow users to track completed and pending tasks.
4. To organize tasks using categories, priorities, and due dates.
5. To provide search and filtering options for quickly finding tasks.
6. To gain practical experience in **HTML5, CSS3, and JavaScript**.
7. To understand and implement browser **Local Storage** for saving application data.

PROJECT SCOPE

The NexDo project provides an effective solution for personal task management through a web-based application.

The application allows users to log in and access a task management dashboard. Users can create new tasks, edit existing tasks, delete unwanted tasks, and mark tasks as completed.

Users can assign different **categories, priorities, and due dates** to tasks for better organization. Dedicated sections allow users to view **Today's Tasks, Important Tasks, and Completed Tasks**.

The application also provides search and filtering functionality to quickly locate specific tasks. Deleted tasks are moved to the Trash section, where they can be restored when required.

NexDo also supports **Dark and Light modes** and uses browser-based **Local Storage** to preserve application data.

TECHNOLOGIES USED

1. HTML5

HTML5 is used to create the structure and content of the application, including the login page, dashboard, sidebar, task forms, buttons, and task sections.

2. CSS3

CSS3 is used to design and style the application. It controls layouts, colors, spacing, animations, responsive design, and Dark/Light mode.

3. JavaScript

JavaScript provides the functionality and interactivity of NexDo. It handles adding, editing, deleting, completing, restoring, searching, and filtering tasks.

4. Local Storage

Browser Local Storage is used to save user and task-related information so that data remains available after refreshing or reopening the application in the same browser.

5. Font Awesome

Font Awesome provides icons that improve the appearance and usability of the application's interface.

6. Google Fonts

Google Fonts provides modern typography to improve the overall appearance and readability of the application.

FEATURES

NexDo includes the following major features:

- **Login and Logout** – Provides user access and logout functionality.
- **Dashboard** – Provides the main interface for managing tasks.
- **Add/Edit/Delete Tasks** – Allows users to create, modify, and remove tasks.
- **Complete/Undo** – Tasks can be marked as completed or changed back to pending.
- **Categories and Priorities** – Tasks can be organized based on category and importance.
- **Due Dates** – Deadlines can be assigned to individual tasks.
- **Search and Filters** – Helps users quickly locate and organize tasks.
- **Today's Tasks** – Displays tasks scheduled for the current day.

- **Important Tasks** – Displays important or high-priority tasks separately.
- **Completed Tasks** – Displays tasks that have already been completed.
- **Trash and Restore** – Deleted tasks can be moved to Trash and restored when required.
- **Dark/Light Mode** – Allows users to switch between visual themes.
- **Local Storage** – Saves task data in the user's browser.
- **Responsive Design** – Adapts the interface to different screen sizes.

PROJECT STRUCTURE

NexDo/

```
|  
├── index.html  
├── style.css  
├── script.js  
├── README.md  
├── Documentation.pdf

```

File Description

index.html – Contains the main HTML structure of the NexDo application.

style.css – Contains the styling, layout, responsive design, and theme-related CSS.

script.js – Contains the JavaScript logic and functionality of the application.

README.md – Contains the project overview, features, technologies, and usage information.

Documentation.pdf – Contains the complete project documentation.

screenshots/ – Contains screenshots of different pages and features of the project.

WORKING OF THE PROJECT

The basic working flow of NexDo is:

Login → Dashboard → Add Task → Manage Task → Complete/Edit/Delete → Filter/Search → Local Storage Saves Data

Step 1: Login

The user opens NexDo and accesses the application through the login interface.

Step 2: Dashboard

After login, the user enters the main dashboard, where tasks and task management options are available.

Step 3: Add Task

The user can create a new task by entering relevant details such as the task title, category, priority, and due date.

Step 4: Manage Tasks

Created tasks can be organized and managed from the dashboard according to their categories, priorities, and due dates.

Step 5: Complete, Edit, or Delete

Users can mark finished tasks as completed, edit existing task information, or delete tasks that are no longer required.

Deleted tasks can be moved to the Trash section and restored when necessary.

Step 6: Search and Filter

Users can search for specific tasks or use filters and dedicated sections such as Today's Tasks, Important Tasks, and Completed Tasks.

Step 7: Local Storage

Task information is saved using browser Local Storage. Changes such as adding, editing, completing, deleting, or restoring tasks are stored so that the data remains available after the webpage is refreshed.

CONCLUSION

The **NexDo – Your Smart Task Manager** project was successfully developed as a frontend web application for organizing and managing daily tasks.

The project implements important functionalities such as **adding, editing, deleting, completing, searching, filtering, categorizing, prioritizing, and restoring tasks**. Features such as due dates, Dark/Light mode, Local Storage, and responsive design further improve the usability of the application.

Through the development of this project, I gained practical experience in **HTML5, CSS3, and JavaScript**. I also learned how to create an interactive user interface, implement application logic, handle user interactions, and manage browser-based data using Local Storage.

Overall, the NexDo project helped improve my frontend web development skills and provided practical experience in building a functional, responsive, and user-friendly web application.
